Marius Jakob
UX/UI-Designer

Experience

Personal development
March 2021 - now
at Home

After I have finished my studies I decided to gain more skills by myself. There are a few design projects I am working on to improve my UI skills. Furthermore I'm teachning myself more programming skills so that I can work more efficient as a designer.

B.A. Internet of Things
September 2017 - February 2021
University of Applied Science Schwäbisch Gmünd

As an IoT-student I have learned the basics of different programming languages.
The main focus was set on user-centered design of connected systems.
Therefore a structured Design Thinking process was very important for our projects in each semester. Furthermore I have got to know a lot of different applications like Sketch, Figma or AdobePhotoshop.

TeamViewer Göppingen
April 2020 - September 2020
Working student User Experience Design

It was a pleasure and a great experience to work for this young and growing company as a working student. I was supporting the UX-team in research and design topics for the development of their app "Pilot".

Instamotion
August 2019 - February 2020
Internship User Experience Design

For my internship I moved to munich and was gaining my first working experience as a designer. As a main part of the design-team I had a lot of responsibility which was important for my personal development. User testing, prototyping and UI design were part of my tasks working for the startup.

Johanniter e.V.
September 2016 - August 2017
FSJ

When I took care of a visually impaired child during my voluntary social year, I was able to learn a lot about dealing with people on a whole new level.
That year had a great impact on the person I am today and I am proud to have had this experience.
